

## Source code

```
public int hashCode() {  
    final int PRIME = 31;  
    int result = 1;  
    if ( name != null ) {  
        result += name.hashCode();  
    }  
    result *= PRIME;  
    if ( num != null ) {  
        result += num.hashCode();  
    }  
    return result;  
}
```
